ROLL ON GRIP TEXTURE

Best Bath Roll-on Grip Texture represents the most advanced technology available on the market today in non-slip floor coatings. It is an entirely GREEN, water-based solution that dries crystal clear and creates an invisible anti-skid finish. It creates a lasting bond with practically any surface and reduces the need for regular waxing, buffing and other costly maintenance procedures. **Best Bath Roll-on Grip Texture** does not attract dirt, creates a barrier against stains and spills, and prevents grout from soiling and discoloration. Cleaning simply requires a mild detergent, or soap and water.

The best line of defense against slip and fall accidents. Designed to be used in demanding indoor and outdoor environments.

Final Step in Floor Safety

Best Bath Roll-on Grip Texture eliminates the need for non-skid strips, surface etchings, rubber mats, and toxic epoxy-based coatings. It works just as well on stone as vinyl composite tile (VCT) and has been enhanced with additives that provide UV protection and prevents the growth of mold and mildew. It does not deface the underlying surface.

Best Bath Roll-on Grip Texture is safe and easy to apply by brush, roller (short nap) or low pressure air spray. One gallon will protect approximately 350 square feet, depending upon the type of surface. It dries quickly and easily and once **Best Bath Roll-on Grip Texture** is applied, it should last one to several years before needing re-application.

Best Bath Roll-on Grip Texture can be applied to most everyday surfaces including *marble, metal, plastic, vinyl, porcelain, slate, ceramic tiles and wood*. It is available in various degrees of coarseness.

APPLICATION INSTRUCTIONS

Best Bath Roll-on Grip Texture can be applied by foam brush, roller (1/8" nap) or low pressure airless spray equipment (HVLP spray systems and a 0.025 inch tip). A gallon of **Best Bath Roll-on Grip Texture** can provide protection over approximately 350 square feet depending on the texture and porosity of the surface. With larger surfaces a roller or spray application is recommended.

1. Stir fully or shake the **Best Bath Roll-on Grip Texture** container thoroughly prior to use. If the base of bottle or container shows a firm opaque layer, stir or shake the contents thoroughly until the settled material becomes fully dispersed and a smooth, milky liquid is observed throughout. This step is very important as the non-slip aggregate which tends to settle must be evenly distributed throughout the solution to realize the maximum efficiency of the product.

2. Once fully shaken, let solution sit for 10 minutes or so to dissipate the bubbles that may have formed during the shaking or stirring process. If you see bubbles on the surface during application, allow solution to sit a while longer until they are eliminated. If necessary, bubbles can be "popped" when the solution is wet by blowing on the surface or applying air pressure (ie. with a hair dryer). Note: Once dry, these bubbles become permanent and leave imperfections in the coating.

3. The targeted surface should be completely dry and free of dirt, debris and oil or grease prior to application. If applying in a tub or shower, clean the surface to be coated with water and appropriate cleaners or scrubbers to remove dirt, stains or soap scum.

4. Prior to application gently stir or shake the **Best Bath Roll-on Grip Texture** container one final time to remix the aggregate throughout the solution.

5. Pour the product into a paint tray or directly on to the floor to be treated. Avoid filling tray to depths greater than 1/4" to ensure that the brush or roller being used is able to easily stir the **Best Bath Roll-on Grip Texture** in the tray, picking up the liquid and the aggregate simultaneously. Apply at first to a small test area to be sure that the application is working properly and producing desired results.

6. Apply product evenly back and forth over the surface at a steady pace, making sure not to coat the product too heavily or apply too much pressure on the brush or roller. The back and forth motion of the roller will assist in preventing and/or eliminating any bubbles in the film that may form on the surface. **Best Bath Roll-on Grip Texture** is a self-leveling product and the coating will even out as it dries. The coating goes on easily and dries to a clear glossy finish. One coat should be sufficient for tubs and showers. Two coats are recommended for surfaces likely to encounter regular foot traffic with hard soled shoes. If a second coat is desired, allow the first coat to become fully dry to the touch (normally 15-30 minutes, depending upon ambient conditions) before applying the second coat.

The surface will be ready to receive regular foot traffic within 4-6 hours after final application. Allow 24-48 hours for full cure before subjecting the surface to heavy abrasion. Do not apply at temperatures below 50°F or above 90°F. When applying, avoid heavy buildup, puddling and overlapping.

IMPORTANT: Best Bath Systems recommends a two-coat application to ensure good film strength and to prevent scratching, chipping or peeling, particularly in high traffic areas or surfaces that encounter intensive foot traffic or other friction.

DO NOT:

- Apply with a foam roller as it will encourage bubbles on the surface.
- Apply with a paint brush as it will often create streaks or brush marks on the surface.
- Apply to surfaces that will be cleaned with a walk-behind motorized rotary cleaner.
